iwis

Joh. Winklhofer Beteiligungs GmbH & Co. KG

Company Headquarters, Parent of the independent subsidiary companies,
Management Organisation of the Internationally operating companies

iwis motorsysteme GmbH & Co. KG

Subsidiary for the automotive sector, for example chain drives and mass balance drives as well as oil pump drives and gear box chains

iwis antriebssysteme GmbH & Co. KG

Subsidiary for the industrial sector, high precision chains and drive systems for a wide range of applications

iwis antriebssysteme GmbH

A distribution and service company within the chain drive industry

iwis agrisystems (Div.)

Competence center for the iwis agricultural chain program for combines and maize harvesting

Together, we are able to offer you even more

Flexible for your success

The company iwis, with its brands JWIS, ELITE and FLEXON, is an international and highly specialized service provider in the drive technology sector. The ELITE product program covers Sprockets, Roller chains, Conveyor chains, Agricultural chains, Special chains, Leaf chains and accessories to cover all fields of chain applications. The FLEXON product program consists of Flat Top chains and Modular belts, corresponding sprockets and additional accessories. Industry, agriculture and many other areas benefit not only from our high quality and reliable products, but also our highly flexible service performance.

The know-how developed over 30 years in the company sectors of research and development, logistics, quality assurance and services are the solid foundations of the present company employing 120 staff in Europe, in the USA and in Asia.

iwis has strategically placed itself in a very strong market position with the development of “ELITE sprockets and high precision roller and conveyor chains” for various industrial drive applications. The “ELITE” product brand stands for reliability, flexibility and ultimately provides a package which is of benefit to the customer.

To improve the performance and efficiency of v-belts and roller chains, iwis offers Elite Tensioning Systems technology. ETS offer a full range of high quality tensioners, combined with a competent level of service which is designed to meet the requirements of OEM and MRO demands on a worldwide basis.

We have created an optimal logistics procedure for our international clients with our German logistics site Wilnsdorf, responsible for the product sector of Roller chains, Special chains, Flat Top chains, ‘Modular belts and Chain wheels and Sontra, responsible for the product sector of Agricultural chains, and our sales offices and warehouses in Europe and in the USA.

iwis aims to provide at all times the best possible solutions for its clients, particularly in highly technical and often difficult applications. We are continuously growing in a hard fought market place and our commitment to service and performance helps to cement relationships which make our clients also our partners. This concept is backed by the know-how and expertise of our specialists in the key areas of development, manufacture, quality assurance, distribution and service. The technological standard of our products is considered throughout the chain industry to be exemplary and iwis consistently invests in the future through our close co-operation with the Chemnitz Technical University, which is a leading international and scientific institution in the drive and conveyor technology sector.

Industrial applications

High precision roller and conveyor chains for numerous industrial applications

- Distribution and materials handling industry
- Packaging industry
- Medical technology
- Food processing industry
- Conveyor technology
- Assembly and industrial handling systems
- Woodworking machinery
- Machine tools
- Drive systems
- General engineering and systems construction
- Glass and ceramics industry
- Measurement and testing technology
- Heat and refrigeration engineering
- Environmental technology
- Plant engineering and construction
- Agricultural machinery

Your perfect engineering partner

iwis has the largest chain R & D department in Europe, having more than 60 development engineers solely engaged for the engineering of chain drive systems. Besides basic development and designing innovative customer solutions, the main focus of iwis R&D division ranges from calculations, design and testing to wear elongation and fatigue strength analysis.

- Special knowledge of noise emission analysis and vibration engineering
- Our laboratory has the capabilities to carry out many different testing possibilities including microscopy, metallography, evaluation of mechanical properties, chemical composition and qualified analysis of data
- Dynamic simulation/analysis of chain drive systems with regard to chain load, torsional vibrations and friction losses
- FEM analysis of individual chain drive parts – static and dynamic stress and strength investigations
- Evaluation of iwis and customer readings at test facilities for verification of simulation models
- Identification of thermal characteristics of chain drives while testing in the climate-testing laboratory.

Evaluation of chain breaking strength and elongation up to 1000kN

More than 15 pulser are available for testing dynamic fatigue strength according to different testing methods

Testing of chain wear elongation behavior on more than 20 test rigs

Sprockets and drive components

Sprockets according to DIN 8188 and ISO 606

iwis offers in the market sector “Sprockets and other drive components” an impressively wide range and broad stock of various sprockets with pilot bores, and has full machining facilities in order to rapidly rework pilot bore sprockets to customers’ demands. Furthermore, iwis provides fully finished sprockets manufactured according to customer designs and drawings.

ISO 12B-1 19.05 mm (3/4") Pitch — Plain Bore

Type A

Type B Plain bore

| Pitch | | Inner width | | Roller-ø | |
|-------|-------|-------------|-------|----------|-------|
| inch | mm | inch | mm | inch | mm |
| 3/4" | 19.05 | .459" | 11.68 | .475" | 12.07 |

Sprockets supplied without keyway and setscrew unless specifically requested.

Some sizes are Made-To-Order, consult iwis for availability.

Tensioning Elements

Automatic chain tensioners compensate the chain elongation in the machines and conveyor systems and that way further the run time of the applied chain. iwis chain tensioners are made from high quality materials. Depending on the application various types are available.

Features of Tensioning Element

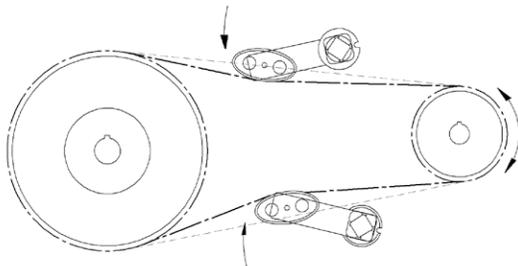

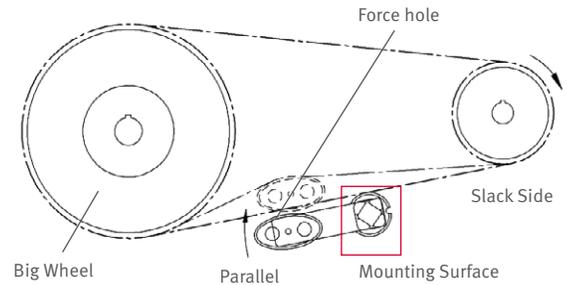

- Chain and belt life is increased
- Noise and vibration damping
- Maintenance free
- Absorbs shock loads
- Safe in operation
- Self adjusting
- Progressive spring characteristics
- Operating angle -30° to 30°
- Resistant to temperature -100° to 185°F

General Mounting Guidelines

Chain Drives

- Always use **Chain Rider** if possible.
- Tensioning Element should be located on the slack side of the chain.
- Mount closer to the big wheel.
- Mount parallel as possible to chain drive
- Mounting surface must be strong, flat and big enough for friction plate.

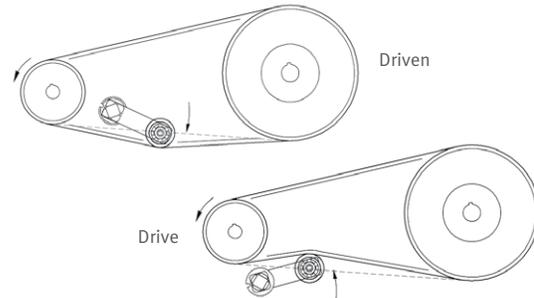

Reversible Chain Drives

- Always use Chain Rider.
- Tensioning Elements on both side of chain.
- Mount closer to the big wheel.
- Mount parallel as possible to chain drive.
- Mounting surface must be strong, flat and big enough for friction plate.

V-Belt & Flat Belt Drives

- Use **Roller** or v-belt pulley with bearing
- Tensioning Element should be located on the slack side of the belt.
- Mount closer to the drive pulley.
- Mount parallel as possible to belt drive
- Mounting surface must be strong, flat and big enough for friction plate.

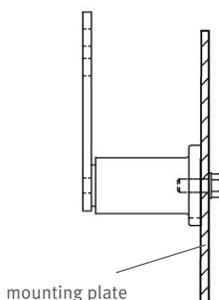

Back Mounted

- Turn unit with a wrench to the desired direction to working deflection scale.
- Retighten mounting bolt and torque to standard specifications

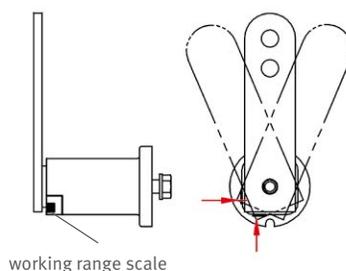

Front Mounted

- Remove center fasteners and insert Front Mount Adaptor Kit.
- Mount Tensioning Element.
- Turn Neidhart Pretension unit with a wrench to the desired direction to working deflection scale.
- Fasten cap screw and torque to standard specification.

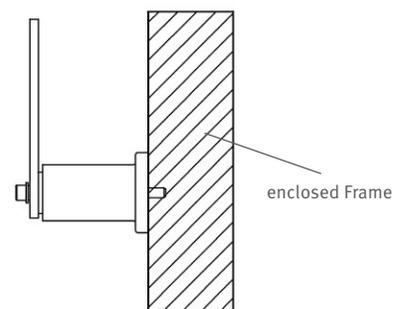

Back mounted

Working range

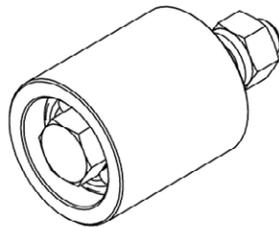

Front mounted

Chemical Resistance

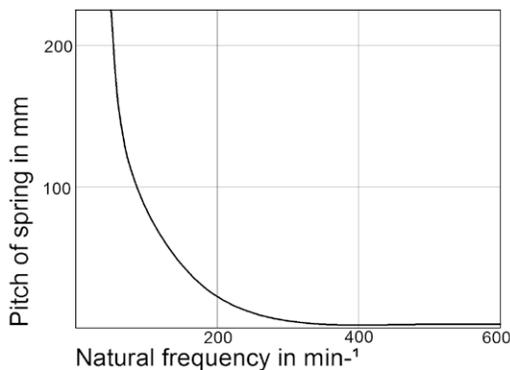

The rubber suspension units are fitted with elastomeric elements containing a natural rubber base (standard quality “Oscillating Mix 01”). The superior technology represents a high standard supported by decades of experience and empirical know-how. The resistance to most chemical agents is excellent.

The following table is merely a guideline and represents the ability of the rubber to resist exposure to various liquids and solvents. It is important to know the degree of concentration of the chemical solvent. Therefore we suggest making a test installation for difficult environments.

| ELASTOMER MIX | 01 | ELASTOMER MIX | 01 | ELASTOMER MIX | 01 |
|-----------------------|----|-----------------------------|----|--------------------------|----|
| Acetic Acid up to 25% | o | Hydraulic Oil | oo | Seawater | ++ |
| Acetone | + | Hydrochloric Acid up to 25% | ++ | Soda Lye up to 25% (20°) | ++ |
| Alcohol | ++ | Hydrogen Sulfide | oo | Sugar Molasses | ++ |
| Ammonia | + | Javel Water | + | Sulfuric Acid up to 10% | ++ |
| Benzole | oo | Lactic Acid | ++ | Tannic Acid | ++ |
| Citric Acid | ++ | Lubrication Oil | oo | Tartaric Acid | ++ |
| Formic Acid | ++ | Lye | + | Toluene | oo |
| Fruit Juice | ++ | Milk | + | Varnish Solvent | oo |
| Fuel Oil | oo | Nitric Acid up to 10% | o | Water | ++ |
| Gasoline | oo | Petroleum | oo | Wine | ++ |
| Glycerine | ++ | Phosphoric Acid up to 85% | ++ | | |

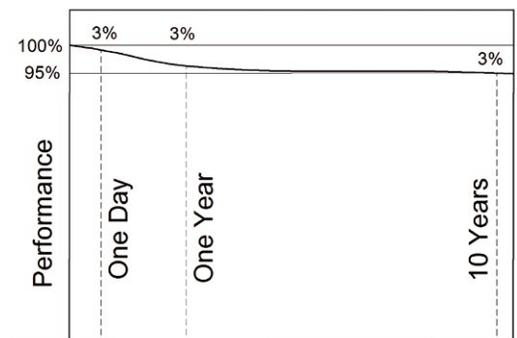

++ excellent + good o sufficient oo insufficient

Characteristics of Rubber

Natural Frequency and Deflection Relation

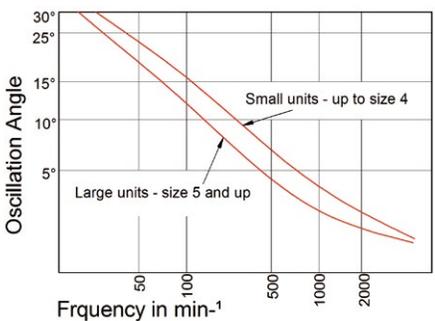

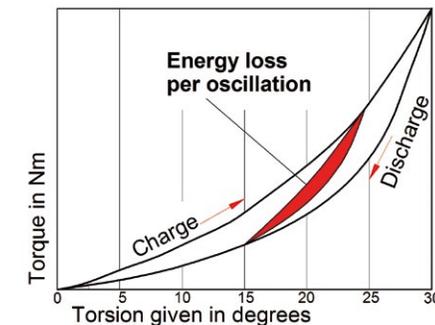

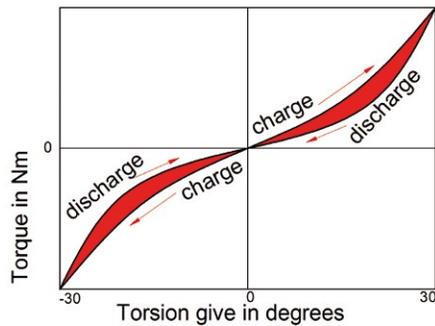

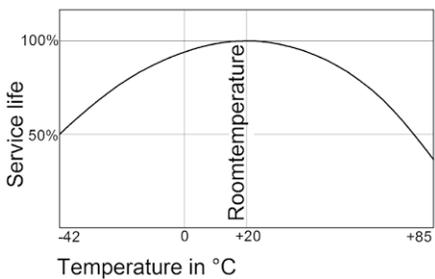

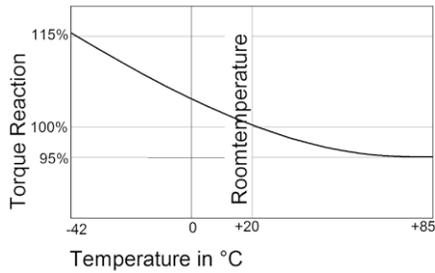

- The empirical setting factor of the rubber suspension unit lies within 3° and 5°, i.e. the inner part does not move back to the neutral 0-position.

Cold Flow and Setting

- Average lifespan of the element ±10 years
- Static performance of molecules has to be considered by the designer.
- According to the respective diagram more than 50% of the permanent deformation has been compensated after only one day of service.

Characteristics of Rubber

Temperature Influence

- Torque reaction ideal at 20 °C
- With falling temperature (minus temperatures) the resulting torque and the corresponding hysteresis increases.
- Due to molecular friction the rubber inserts warm up. Therefore the effective element temperature does not directly correspond with the ambient temperature.

Service Life

- Service life 100% at 20°
- The opposite service life curve shows the deduction of the life expectation to factor 1 at extreme temperatures.

Progressive Spring Characteristics

- Corresponding to the unique system of the rubber suspension units an analogous and slightly progressive spring characteristic may be achieved, when load is applied in the + or - torsion range.

Noise and Vibration Damping

- The damping rate of the rubber suspension unit lies within the ideal range of 15 to 25°.

Permissible Frequencies

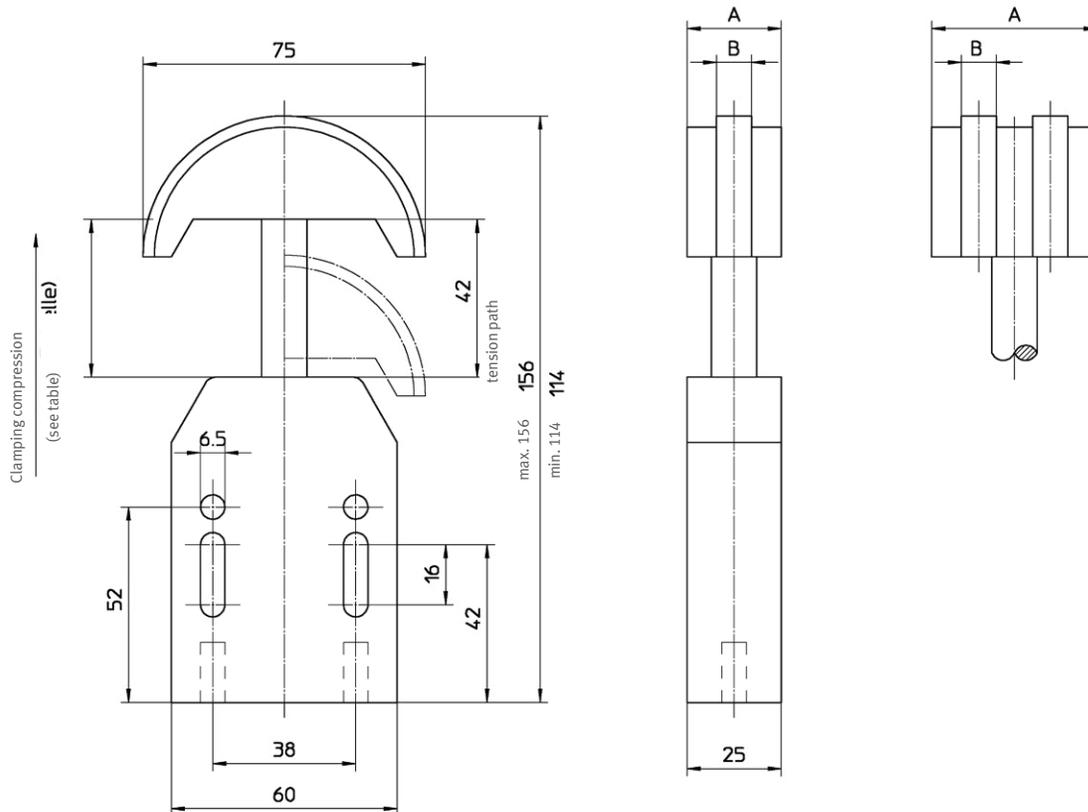

- Small oscillating angles = high frequencies
- Large oscillating angles = low frequencies

Chain Tensioner Size 1

The tensioning pressure of the newly developed chain adjuster is transferred to the chain by means of a recoil-attenuated gas-filled spring device via the sliding pad. By using the familiar gas-filled spring device with recoil attenuation a consistent tensioning pressure is attained over the entire tension path. This key advantage compared with the previous design of chain adjusters with a flat spiral spring (sharply falling spring characteristic), guarantees a largely vibration-free chain drive.

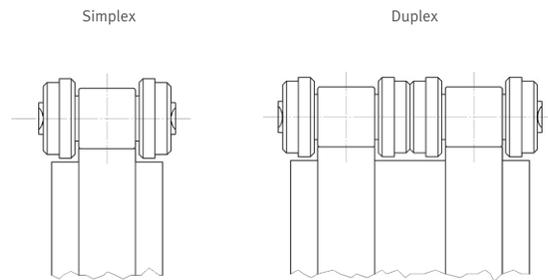

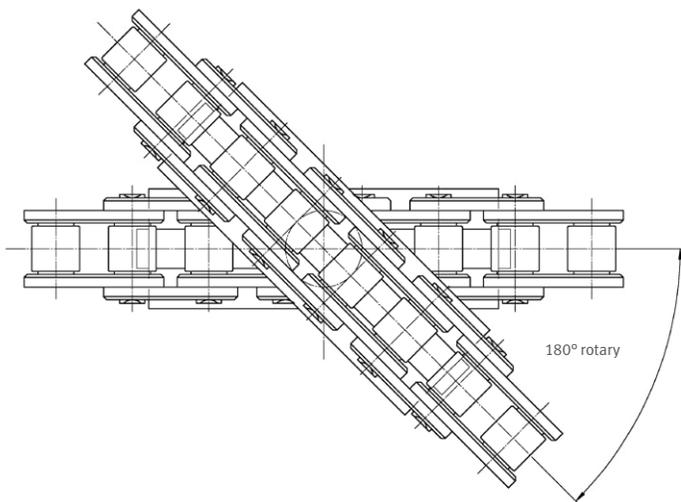

Advantages:

- Consistent tensioning pressure along the entire tensioning path
- Vibration and noise attenuating
- Low coefficient of friction
- Wear-resistant
- Self-lubricating
- Range of application from -30 to +80 °C

Chain Tensioner Size 1

The housing of the chain adjuster is made from high-grade fibre-glass reinforced polyamide. The wear-resistant and noise-damping slide pads are made from the ultra high molecular high-density polyethylene material FT 1000.
